

## 6" BOLLARD COVERS

The 6" diameter bollard cover has 7.1" inside diameter (ID) and comes in lengths up to 72 inches long. It is ideal for bollard posts with a diameter up to 6.9". Our bollard covers protect and enhance the appearance of steel bollard posts used both indoors and outside. They are manufactured from durable, yet flexible, 0.125" thick high density polyethylene (HDPE), and are UV treated for longevity.

These post sleeves are available in thirteen different colors including: standard yellow, black, blue, orange, red, white, light gray, gray, brown, and dark green. In addition, each bollard comes with one of seven 3M #5100 reflective tape colors including: red, blue, white, black, green, orange or yellow. Our 6" bollard covers come with patented Gripper Tabs to secure the post sleeve to the steel bollard post. If there is excess space between the post and the bollard cover, you may request foam tape strips to fill the gap (available at an additional charge).

They are designed to absorb impact from car doors and other contacts to protect both vehicles and posts from expensive damage. When compared with the annual cost of painting and repairing steel posts, our bollard covers offer a significantly less expensive option. This product is manufactured in the USA and is guaranteed against fading or cracking for 5 years. For large quantities or bulk-shipping rates of 6" bollard covers, please call us at (800) 352-6609.
