

safety. compliance. reliability.

Features

- NFPA , IFC , CARB Compliant
- UL 142 Double Wall Containment
- UL 142 Open Secondary Containment
- UL 2085 Labeled Fire Rated
- UL 508A Controls
- UL 342 Positive Displacement Pumps
- Fuel Level Monitoring/Control
- Fuel Leak Detection
- Pre-Installed Pumps, Vents, Supply
- Valve Assembly, etc.
- Factory Tested & Certified

Components

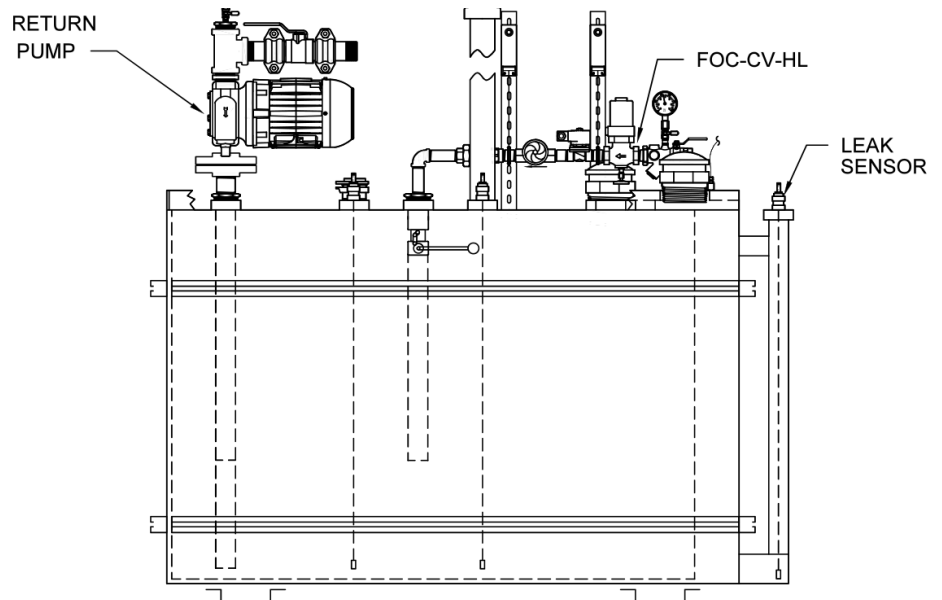

- Supply/Return Pre-Mounted Pumps
- Supply Inlet Control Valves, Flow Indicator
- Fuel Oil Temperature Sensor
- Containment Leak Sensor (2)
- Primary Tank Updraft Vent
- Primary Tank & Secondary Cont. Emergency Vent (2)
- Mechanical Level Gauge
- Generator Suction/Return Lines
- Exterior Primer with Epoxy Finish

SafeSite™ Day Tanks

Integrated Day Tank Systems

Core offers integrated day tank packages for mission critical and stand-by emergency generator installations, including boiler supply. Pre-engineered fully integrated systems are designed to continuously monitor and control the level of fuel in day tanks, provide leak detection and alarms for tanks and piping. UL508A Controller manages pumps (supply/return) and valve assemblies.

State-of-the-art equipment used with Core's integrated systems minimizes installation problems as multiple suppliers are eliminated. Having a single source of supply assures responsibility for proper interface for safe and reliable fuel supply.

Generator Sub-Base Fuel Package • Supply Control Valve Assembly • Return Pump Assembly Enclosure
