

# DieselPure Limited Warranty

The DieselPure “Efficiency” series fuel filtration equipment is warranted for a period of one(1) year from date of delivery on parts replacement.

The ASME pressure vessels have a warranty period of fifteen years.

Under normal operating conditions, the hardware should have a life expectancy of over thirty(30+) years. Pumps may need a service kit every 4-5 years.

Electric motors are continuous duty and they should last for ten years. The electrical control panels are subject to current fluctuations and they, along with the battery backup may need inspections annually.

The metal enclosures should have their paint touched up if rust spots begin to develop.

While the systems are maintained under an annual filter contract, the warranty of parts replacement, software upgrades and tech support continue. This support will continue unless the DieselPure system falls out of contract.

Replacement panels and parts are available from DieselPure. For further information or to place a warranty call, please contact:
